Screen 1

This is the first screen of Inventory Management application. A person could login by entering his/her Login Credentials and their User type (User/ Store/ Purchase).

Screen 2

Requisition screen is the first screen after the login screen. Here Requisition data can be viewed in list form which includes Requisition Id, User Id, Due Date and its Status.

The REQUEST button and the PRODUCTS button redirect to screen 3 and screen 4 respectively.

Screen 3

The REQUEST screen has the list of products along with Product Id, Current Quantity, Threshold Quantity, Order Pending, Ordered Quantity and Received Quantity.

It has three buttons namely 'Send for Procurement', 'Incoming Stock' and 'Adjust Procurement Quantity'. On selecting the respective check boxes of the products in the list, they could be sent for procurement, they could be marked as incoming stock and the procurement quantity can be adjusted.
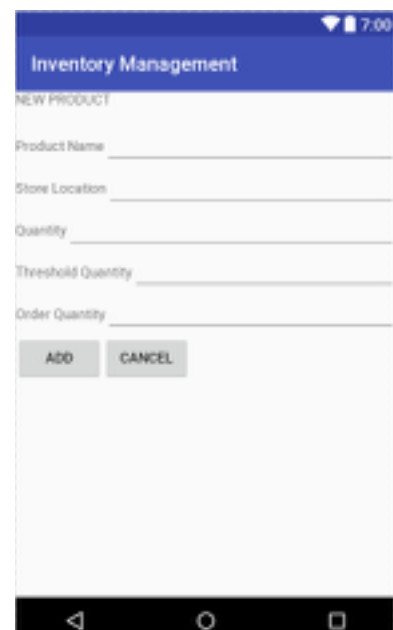

Screen 4

The Product Screen consists of the list of all products along with its product ID and its quantity.

New products could be added to the store on clicking the ADD button.

Screen 5

This is the ADD screen where new products could be added to the store by entering Product name, Store Location, Quantity, Threshold Quantity and Order Quantity.

Screen 6

In this screen, products could be marked as Raised/ Available/ Full Issued/ Partially Issued/ Purchase by selecting the respective product's check boxes.

This is the EDIT SCREEN where the product details (Product Id, Product Name, Store Location, Quantity, Threshold Quantity) of a product could be edited as and when required.
